

HP Anyware for Windows 365

Quickly and seamlessly deploy HP Anyware powered digital workspaces with Windows 365 directly from your Microsoft Intune portal

Overview

HP Anyware for Windows 365 integrates HP Anyware powered digital workspaces with the persistent, secure, and complete Windows desktop experience of a Cloud PC to support hybrid work scenarios.

The new value-add solution supports the diverse hybrid work needs of IT admins and employees alike to deliver the same simple deployment and management capabilities that current Windows 365 customers expect.

It provides a shared management experience between Microsoft Intune and HP Anyware for seamless provisioning of Windows 365 Cloud PCs without the need to install connectors or gateways in your environment. This eliminates the need to open inbound network ports, reducing IT networking demands, alleviating security concerns, while lowering infrastructure and network costs.

The net result? Scale cost-effectively with low, predictable monthly costs.

Solution benefits

- Easily deploy and manage HP Anyware-powered digital workspaces within your existing Azure ecosystem, leveraging familiar Microsoft tools such as Microsoft Intune and Entra ID
- IT admins can provision and manage Cloud PCs in Microsoft Intune along with other Cloud PCs and physical endpoints, without the need to install gateways in your environment
- Enjoy low, predictable monthly costs with Windows 365 and lower network costs with HP-hosted session gateways as there is no need for customers to deploy connectors or gateways in their own Azure network
- End users access a secure, high-definition, and highly responsive experience for graphics-accelerated applications delivered by the underlying PCoIP technology.
- HP Anyware delivers AES 256-bit encrypted pixels to endpoints and offers Trusted Zero Client endpoint devices to meet the most stringent security requirements for end user computing

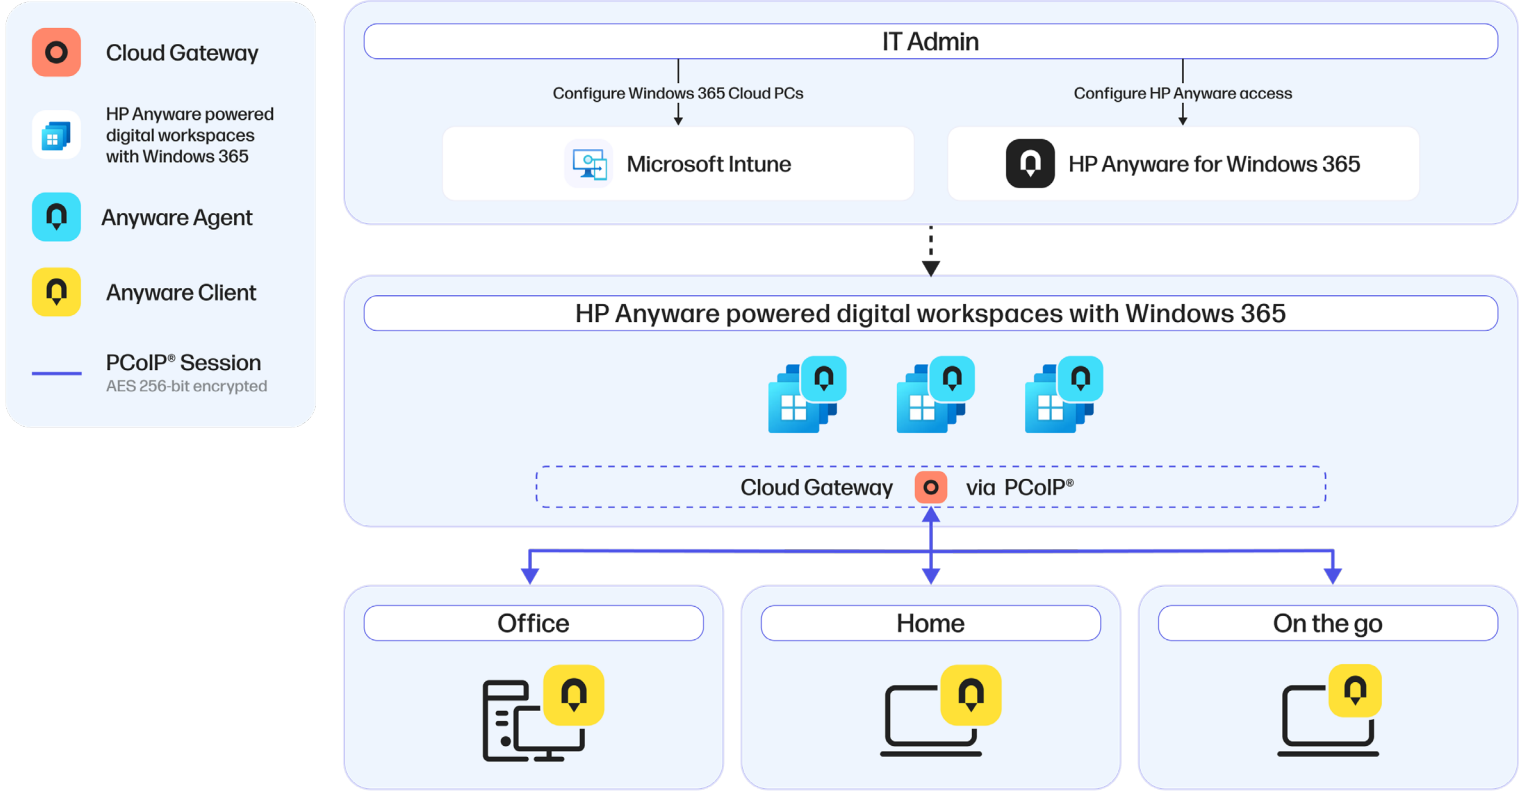

How to buy

HP Anyware for Windows 365 is an integrated solution built in Microsoft Intune to deliver a simplified, scripted, and automated deployment of HP Anyware with Windows 365. Anyware for Windows 365 requires an HP Anyware license and Windows 365 Enterprise license. Contact your authorized HP sales representative, Microsoft account manager, or reseller for details.

Supported endpoints

HP Anyware-enabled endpoint devices running Windows®, Linux® or macOS, as well as Trusted Zero Clients or PCoIP®-enabled thin clients.

HP Anyware for Windows 365

Deployment requirements

Microsoft:

- Windows 365 Enterprise license
- Fully integrated Microsoft Intune that comes with Windows 365 Enterprise license
- Microsoft Entra domain in the same tenant as Microsoft Intune
- Azure admin account:
 - › Microsoft Entra Global Admin for required authorizations in the HP Anyware for Windows 365 portal
 - › Intune Admin for enabling Anyware connector in Microsoft Intune
- For more information about the Windows 365 requirements, see [Windows 365 Requirements](#)

HP Anyware:

- HP Anyware license
- Cloud PCs must have access to: <https://cas.teradici.com> on TCP 443 for Broker connectivity
- Anyware Client version 24.07 or higher on Windows®, MacOS®, or Linux® devices, including Trusted Zero Clients or PCoIP®-enabled thin clients
